-

Projects

- **Friendzone — dating app on neural networks.** I create different filters (recommenders) with which users can rank people from VK based on their preferences (e.g. I want to find a girl

interested in gaming and travelling). It works on NN vectorizer and recommender model. Also all infrastructure things such as MongoDB, Docker, Linux server, NGINX and others lay on me.

- [Leonard Bot](#) - **multifunctional Telegram bot for personal use**. Developed with my friend to let anyone use daily needed functions easier using Telegram. WolframAlpha, 9GAG, Product Hunt, Uber and more useful things are in it. Built on Python with pre-made and self-written libraries for different services.
